

Table S1. Values of loading of principal component analysis (PCA) of morphological traits measures. All traits except TAL were used as residual values of the linear regression between the trait and SVL in PCA. HW: head width; HH: head height; HL: head length; TRL: trunk length; INL: interbrachial-nasal length; HUL: humeral length; FAL: forearm length; FL: femur length; TL: tibia length; FTL: hind foot length; TAL: tail length; PG: pelvic girdle; SG: shoulder girdle; SHF: scales of the third finger of hindfoot; SFF: scales of the third finger of forefeet.

Trait	PC1	PC2	PC3	PC4	PC5	PC6	PC7	PC8	PC9
